WARNING

The chassis in this receiver is partially hot. Use an isolation transformer between the line cord plug and power receptacle, when servicing this chassis.

To prevent electric shock, do not remove cover. No user — serviceable parts inside. Refer servicing to qualified service personnel.

WARNUNG

Das Chassis dieses Empfangsgerätes steht teilweise unter hohen Spannungen. Bei Wartungsarbeiten an diesem Chassis muß deshalb ein Isolationstransformator zwischen dem Netzkabelstecker und der Steckdose verwenden. Um elektrische Schläge zu vermeiden, darf das Abdeckgehäuse nicht entfernt werben. Im Inneren des Gerätes befinden sich keine vom Benutzer einstellbaren Teile. Wartung und Reparaturarbeiten müssen qualifiziertem Service-Personal überlassen werden.

IMPORTANT SERVICE NOTES

Maintenance and repair of this receiver should be done by qualified service personnel only.

SERVICING OF HIGH VOLTAGE SYSTEM AND PICTURE TUBE

When servicing the high voltage system, remove static charge from it by connecting a 10k ohm Resistor in series with an insulated wire (such as a test probe) between picture tube dag and 2nd anode lead. (AC line cord should be disconnected from AC outlet.)

- 1. Picture tube in this receiver employs integral implosion protection.
- 2. Replace with tube of the same type number for continued safety.
- 3. Do not lift picture tube by the neck.
- 4. Handle the picture tube only when wearing shatterproof goggles and after discharging the high voltage completely.

X-RAY

This receiver is designed so that any X-Ray radiation is kept to an absolute minimum. Since certain malfunctions or servicing may produce potentially hazardous radiation with prolonged exposure at close range, the following precautions should be observed:

- 1. When repairing the circuit, be sure not to increase the high voltage to more than 29.0 kV, (at beam 0μ A) for the set.
- To keep the set in a normal operation, be sure to make it function on 24.8 kV ± 1.5 kV (at beam 1.1 mA) in the case of the set. The set has been factory — Adjusted to the abovementioned high voltage.
 - If there is a possibility that the high voltage fluctuates as a result of the repairs, never forget to check for such high voltage after the work.
- 3. Do not substitute a picture tube with unauthorized types and/or brands which may cause excess X-ray radiation.

BEFORE RETURNING THE RECEIVER

Before returning the receiver to the user, perform the following safety checks.

- 1. Inspect all lead dress to make certain that leads are not pinched or that hardware is not lodged between the chassis and other metal parts in the receiver.
- Inspect all protective devices such as non-metallic control knobs, insulating fishpapers, cabinet backs, adjustment and compartment covers or shields, isolation resistorcapacity networks, mechanical insulators etc.

WICHTIGE SERVICE-HINWEISE

Wartung und reparaturarbeiten an diesem Empfänger sollten nur von qualifizierten kundensttechnikern ausgeführt werden.

WARTUNG DES HOCHSPANNUNGSSYSTEMS UND DER BILDRÖHRE

Bei wartung des Hochspannungssystems leiten Sie dessen Statische Aufladung durch Zwischenschalten eines 10-kiloohm-Widerstandes mit hilfe eines isolierten Drahtes (wie z.B einer Prüfsonde) zwischen die Netzkabelstecker solte dabei aus der Netzteckdose gezogen werden.)

- 1. Für die Bildröhre in diesem Empfänger wir dein integrierter Implosions-schutz verwendet.
- 2. Ersetzen Sie die Bildröhre durch eine Röhre mit derselben Typennummer, um eine dauernde Sicherbeit zu gewährleisten.
- 3. Haben Sie die Bildröhre nicht am Hals hoch.
- 4. Fassen Sie die Bildröhre nur dann an, wenn Sie eine splitterfreie Schutzbrille tragen und nachdem Sie die Hochspannung vollkommen ableiteten.

RÖNTGENSTRAHLUNG

Dieser Empfänger wurde so gebaut, daß Röntgenstrahlung auf einem absoluten Minimum gehalten wird. Da durch bestimmte Funktionsstörungen und Wartungsarbeiten beim längeren Ausgesetztsein in unmittelbarer Nähe eine eventuell gefährliche Strahlung verursacht werden kann, sollten die folgenden Vorsichtsmabregeln beachtet werden:

- 1. Beim Reparieren der Schaltung darauf achten, daß die Stromstärke für das Gerät auf nich mehr als 29,0 kV, (Strahlstrom = 0 μ A) erhöht wird.
- Um das Gerät in normalen Betriebszustand zu halten, darauf achten, daß die hochspannung 24,8 kV ± 1,5 kV (Strahlstrom = 1.1 mA) befrägt. Das Gerät Wurde im Werk auf die obenerwähnte Hochspannung eingestellt.
 - · Falls die Möglichtkeit besteht, daß die Hochspannung infolge von Arbeiten die Hochspannung zu überprüfen.
- Die Bildröhre darf nicht gegen andere Type oder Bildröhren anderer Firmen ausgetauscht werden, da diese übermäßig hohe Röntgenstrahlung verursachen könnten.

VOR RÜCKGABE DES EMPFÄNGERS

Bevor dem Empfänger an den Kunden Zurückgeben, sollten Sie die folgenden Sicherheitsüberprüfungen vornehmen.

- Überprüfen Sie sämtliche Leitungen, um sich zu vergewissern, daß diese nicht eingeklemmt sind, oder daß sich keine Kleinteile zwischen dem Chassis und anderen Metallteilen im Empfänger befinden.
- Überprüfen Sie sämtliche Schutzvorrichtungen, wie z.B die nichtmetallischen Reglerknöpte, Isolierpapiere, Gehäuserückseiten, Einstell - und Zwischenraumabdeckungen oder Anschirmungen, Isolierwiderstands-Kapazitätsnetzwerde, mechanische Isolatoren usw.

■ PIF/AFT/AGC ADJUSTMENT

Adjusting Procedures Adjusting Conditions

1. Tuner IFT Coils

The tuner has been factory preset (no 1. Adjust the tuner IF coils to obtain the waveform adjustment is needed).

- 1. Set reception channel at E10 (When such signal is not available, set V_T voltage at 10V in V_H band.)
- 2. Connect sweep generator's output to the test point of tuner, by using a 75 Ω DC cut probe.

Connection Diagram of 75 Ω DC Cut Probe.

Note: The sweep generator's probe should be grounded closely to the tuner test point.

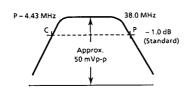

- 3. Output level of sweep generator: 85 dB
- 4. Connect response lead (low impedance probe with detector) to TP201 (collector of Q201).

Connection Diagram of Low Impedance Probe (with Detector).

- Apply DC 4.0V to TP202 (pin (48) of IC801).
- 6. RF AGC:

as shown figure below.

Adjust so that "P" and "C" are at the same level.

Adjusting Point ☐ T205: AFT coil

1. Receive "PAL COLOUR BAR (channel-E12)" signal. If channel-E12 signal is not available, it is enough

to receive the signal of more than channel-E5 or UHF signal.

• Signal strength: Over 55dB, Below 80dB

2. Connect the Regulated DC Power Supply to the tuner's V_T (approx. 11V to be applied) to receive channel-E12.

3. Connect oscilloscope to TP401.

Oscilloscope range: 0.5 V/div.

• Sweep time:

20 μsec/div.

Synchronization: Horizontal sync.

4. Connect the output of SSG (Standard Signal Generator) to the tuner IF output terminal across a capacitor of 1pF.

• SSG output: 38.0 MHz ± 5 kHz (non modulated)

• SSG output level: approx. 85 dB

* When the preset button is at PRESET position, AFT is turned off.

* When the preset button is set at NORMAL position, AFT is turned on.

Fine Adjustment

1. Press the preset key to adjust the voltage of the Regulated DC Power Supply until there is no beating in the oscilloscope's waveform.

2. Set the preset button at NORMAL position.

3. Adjust T205 so that no beating is caused at the output waveform.

Adjusting Conditions

- Prior to the purity adjustment, warm up the unit with beam current of more than 700 μA, for more than 30 minutes.
- Receive the green signal alone and adjust the beam current to approx. 700 μA.
- 3. Fully degauss the CRT with the degaussing coil.
- Before the purity adjustment, it is needed to roughly adjust the static convergence.
- Set the purity magnet at the position which gives zero (0) magnetic field.

Adjusting Procedures

Adjustment:

During the adjustment, keep the unit facing the east.

- Observe the green spots ("a" and "b") with a microscope as shown in Fig. A, and adjust the purity magnet so that they are at the specified landing position.
- If the right and left green spots are both deviated outwards from their landing positions as shown in Fig. B, push the deflection yoke forwards until their positions are corrected.
- If the beam landing is shifted to right or left as shown in Figs. C and D, adjust the opening degree of the purity magnet so that the beam landing is correctly positioned.
- Adjust the purity magnet so that the beam landing is correct at either of the central part, right and left parts of screen, then check that the green beams at four corners of screen are all correctly positioned.
 - Finally, check that the beam landing at any pat of screen is satisfactory with the Rank "B" specifications.
- If the green beam is positioned to mix with the other colour, pull the deflection yoke backward.
 - Outside of the specified landing:
 To front of the deflection yoke.
 - Inside of the specified landing:
 To back of the deflection yoke.
- Set the raster rotation at "0" position (with the unit facing the east).
- 7. Tighten the screws of the deflection coil.
 Tightening torque: 11 kg ± 2 kg:

Einstellbcdingungen

- 1. Vor der Farbreinheitseinstellung muß das Gerät mit dem Strahlenstrom von über 700 μA für mehr als 30 Minuten vorgewärmt werden.
- Nur das Grün-Signal empfangen und den Strahlenstrom auf ca. 700 μA einstellen.
- 3. Den Bildschirm mit der Entmagnetisierungsspule vollkommen entmagnetisieren.
- 4. Vor der Farbreinheitseinstellung muß die statische Konvergenz grob eingestellt werden.
- Den Reinheitsmagneten in die Position bringen, die eine magnetische Feldstärke von Null ergibt.

Einstellverfahren

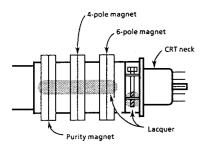

Einstellung:

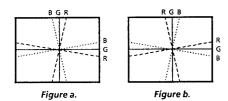

Während der Einstellung muß daß Gerät in östliche Richtung gedreht werden.

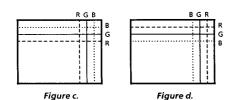

- Die grünen Flecken ("a" und "b") mit einem Vergrößerungsglas (siehe Abb. A) betrachten und den Farbreinheitsmagneten so einstellen, daß sich die Flecken in der festgelegten Aufprallposition befinden.
- Wenn die rechten und linken grünen Flecken von ihrer Aufprallposition nach außen abweichen (siehe Abb. B), das Ablenkjoch nach vorne drücken, bis ihre Positionen korrigiert sind.
- Wenn der Strahlenaufprall nach rechts oder links verschoben wird (siehe Abbildungen. C und D), den Öffnungswinkel des Farbreinheitsmagneten so einstellen, daß der Strahlenaufprall korrekt positioniert ist.
- 4. Den Farbreinheitsmagneten so einstellen, daß der Strahlenaufprall in der Mitte sowie am rechten bzw. linken Bildschirmrand korrekt ist. Danach überprüfen, ob die grünen Strahlen an den vier Ecken des Bildschirms richtig positioniert sind. Schließlich ist noch sicherzustellen, ob der Strahlenaufprall an jeder Stelle des Bildschirms gemäß den Spezifikationen von "Rang B" entspricht.
- Wenn der grüne Strahl so positioniert ist, daß er sich mit einer anderen Farbe mischt, muß das Ablenkjoch nach hinten gezogen werden.
 - Außerhalb des festgelegten Aufprallpunkts:
 Das Ablenkjoch nach vorne drücken.
 - Innerhalb des festgelegten Aufprallpunkts: Das Ablenkjoch nach hinten drücken.
- 6. Die Rasterrotation auf "0" einstellen. (Das Gerät muß dabei nach Osten ausgerichtet sein.)
- 7. Die Schrauben der Ablenkspule festziehen. Anzugsmoment: 11 kg ± 2 kg.

■ CONVERGENCE ADJUSTMENT

Approx. 100° Approx. 100° Wedge "b" Wedge "c"

Adjusting Conditions

This adjustment should be performed after the purity magnet adjustment.

- 1. Receive "CROSSHATCH PATTERN" signal.
- 2. Set the Brightness control and Contrast control at MAX position.

Adjusting Procedures

STATIC CONVERGENCE

- Adjust the opening degree of the 4-pole magnet and rotate the magnet to converge red and blue lines.
- Adjust the opening degree of the 6-pole magnet and rotate the magnet to converge red, blue and green lines.

DYNAMIC CONVERGENCE

Dynamic convergence (convergence of the three colour fields) at the edges of CRT screen is accomplished in the following manner.

• Convergence in Fig. a:

Insert wedge"a" between the deflection yoke and CRT, and tilt the deflection yoke upward until the mis-convergence shown in *Fig.* a is corrected.

• Convergence in Fig. b:

Insert wedges "b" and "c" between the deflection yoke and CRT, and tilt the deflection yoke until the mis-convergence shown in *Fig. b* is corrected.

• Convergence in Fig. c:

Insert wedge "c" deeply between the deflection yoke and CRT, and tilt the deflection yoke to right until the mis-convergence shown in Fig. c is corrected.

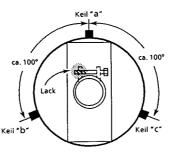

• Convergence in Fig. d:

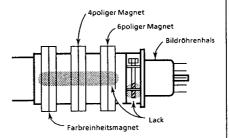

Insert wedge "b" deeply between the deflection yoke and CRT, and tilt the deflection yoke to left until the mis-convergence shown in *Fig. d* is corrected.

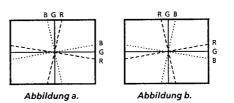

- 4. Stick the three wedges onto the CRT, and apply glass tapes thereon.
- Apply lacquer to the deflection yoke screw, magnet unit (made of purity, '4-pole and 6-pole magnets) and magnet unit screw.

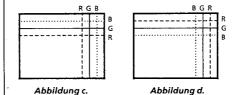

After the adjustment, receive either the Red or the Blue signal and check that there is no mixture with the other colour signal.

KONVERGENZ-EINSTELLUNG

Einstellbcdingungen

Diese Einstellung darf erst nach der Einstellung des Farbreinheitsmagneten durchgeführt werden.

- 1. Das "KREUZMUSTER"-Signal empfangen.
- Die Helligkeits-und Kontrastregler in die MAX-Einstellposition bringen.

Einstellverfahren

STATISCHE KONVERGENZ

- Den Öffnungswinkel des 4poligen Magneten einstellen und den Magneten rotieren, um die roten und blauen Zeilen zu konvergieren.
- Den Öffnungswinkel des 6poligen Magneten einstellen und den Magneten rotieren, um die roten, blauen und grünen Zeilen zu konvergieren.

DYNAMISCHE KONVERGENZ

- Die dynamische Konvergenz (Konvergenz der drei Farbfelder) an den Kanten des Bildschirms wird wie folgt erzielt:
- Konvergenz in Abb. a:

Den Keil "a" zwischen Ablenkjoch und Bildschirm einschieben, dann das Ablenkjoch nach oben Kippen, bis die in *Abb. a* gezeigte Fehlkonvergenz korrigiert ist.

• Konvergenz in Abb. b:

Die Keile "b" und "c" zwischen Ablenkjoch und Bildschirm einschieben, dann das Ablenkjoch kippen, bis die in *Abb. b* gezeigte Fehlkonvergenz korrigiert ist.

• Konvergenz in Abb. c:

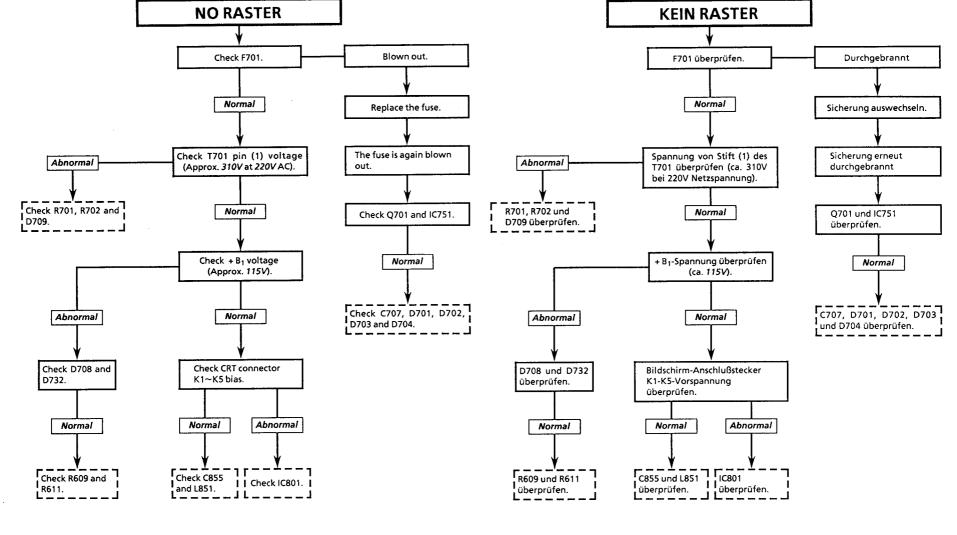

Den Keil "c" tief zwischen Ablenkjoch und Bildschirm einschieben, dann das Ablenkjoch nach rechts kippen, bis die in *Abb.* c gezeigte Fehlkonvergenz korrigiert ist.

Konvergenz in Abb. d:

Den Keil "d" tief zwischen Ablenkjoch und Bildschirm einschieben, dann das Ablenkjoch nach links kippen, bis die in *Abb. d* gezeigte Fehlkonvergenz korrigiert ist.

- 4. Die drei Keile am Bildschirm festkleben und mit Glasfolie sichern.
- Lack auf Ablenkjochschraube, Magneteinheit (bestehend aus 4-und 6poligen Farbreinheitsmagneten) und Magneteinheits-Schraube auftragen.

Nach der Einstellung entweder das rote oder blaue Signal empfangen und Überprüfen, daß keine Mischung mit einem anderen Farbsignal besteht. TROUBLE SHOOTING TABLE
